

**Take charge
of your dialysis.**
At home.

Why dialysis at home?

Improved health benefits

- Fewer hospital visits ¹
- Better quality of life ²
- Longer life expectancy ³
- Ability to maintain employment ⁴

Flexibility to live life on your schedule

Free up more time for yourself and loved ones. No need to worry about traveling to and from the clinic. Be more present for cherished family moments. Fit dialysis in your life, rather than trying to live around dialysis.

You are in charge, with support at every step

You and your care partner are trained to manage your dialysis treatments from the comfort of your home. Teams from Outset and your clinic will be available to provide support when you need it.

There is a better way to dialyze

A PERFECT FIT FOR YOUR HOME

The Tablo[®] Hemodialysis system fits effortlessly into your home, with minimal tubes and wires. All you need is tap water and an electrical outlet. Plus, an entire month of Tablo supplies fit in a small closet.

EASY TO LEARN

A touchscreen guides you through every step, allowing you to complete training for home use in as little as two weeks.⁵

SIMPLE SETUP

Start treatment in less than 20 minutes, saving time with dialysate created on demand.

CONNECTED TO YOUR HEALTHCARE TEAM

Smart sensors and wireless data transfer eliminate the hassle of manual data entry. Your doctor and healthcare team will be connected to your treatment information online via MyTablo™.

HOME, BUT NOT ALONE

Rest easy knowing that access to your Tablo care team is always just a call away and available to you 24/7.

Meet Tablo

“ I feel a sense of normalcy. I’m active in my church. I’m spending time with my family. It means that in spite of my kidney disease, I have my life back. ”

— Tracey A, Recently transplanted former Tablo home hemodialysis patient.

Administrators at your clinic are also here to help.

The Tablo® Hemodialysis System is indicated for use in patients with acute and/or chronic renal failure, with or without ultrafiltration, in an acute or chronic care facility. Treatments must be administered under physician's prescription and observed by a trained individual who is considered competent in the use of the device. The Tablo Hemodialysis System is also indicated for use in the home. Treatment types available include Intermittent Hemodialysis (IHD), Sustained Low Efficiency Dialysis (SLED/SLEDD), Prolonged Intermittent Renal Replacement Therapy (PIRRT), and Isolated Ultrafiltration.

This device is not indicated for continuous renal replacement therapy (CRRT) and is cleared for use for up to 24 hours.

The dialysate generated by this device is not sterile and should not be used for intravenous (IV) infusion.
